Timing		Category
Next service	○	**Apply at all sites**
	◉	**Apply at affected sites as listed below**
	○	**Optional to improve functionality of product**

Purpose of this document:

It informs about an effect that appears in case the "Edit Image" functionality is used by the operator prior to receiving the exposure parameters.

Affected serial number(s) / batch: All DX-D100 in combination with NX 2.0.8400 / 3.0.8400

1   Introduction/purpose

Symptom   Exposure parameters do not appear within the GUI of the examination window.

Cause   If a patient is selected from RIS or manually entered the required routine is used for the exam thumbnail to appear, i.e Chest PA.

If the Edit Image functionality ("Edit" function within the 'Examination' window) is used to change the original exam setting prior to receiving the exposure parameters, the exposure parameters do not appear within the GUI.

On edit exposure the exposure parameters are not resend.
XRDI still replies with the original SubExposureUid which is not found anymore in the active presentation state. Consequently the received parameters are not stored anymore.

Solution   Will be solved in NX 2.0.8600 / 3.0.8600.

IMPORTANT:

Inform the customer:

The "Edit" function within the "Examination" window should not be used prior the exposure parameters are shown within the GUI of the examination window.
